Name of the Guide		RAJKUMAR PATIL

The CareerSync: AI-Powered Career Development & Skill-Gap Intelligence Platform is an intelligent career development system designed to help students and early-career professionals understand their current skills, identify skill gaps, and make informed career decisions. Unlike traditional resume screening and job recommendation systems, CareerSync focuses on continuous career development by connecting skill assessment, career readiness, personalized learning, and job-role recommendations.

The system allows users to create a career profile and upload their resumes to extract important information such as education, technical skills, certifications, experience, and projects. Natural Language Processing (NLP) and Machine Learning techniques are used to analyze user profiles, map skills to target career roles, identify missing or weak skills, and generate a personalized Skill-Gap Report. Based on the identified gaps, the platform recommends suitable learning paths and career opportunities.

CareerSync also provides a Career Readiness Score and tracks the user's skill-development progress over time. As users complete learning activities, acquire new skills, or update their career goals, the system adapts its recommendations and suggests the next relevant skills, learning activities, projects, or job roles. This adaptive feedback loop makes the platform responsive to the changing needs and progress of individual users.

The main objective of CareerSync is to provide an accurate, personalized, and adaptive career development solution. By combining AI, NLP, skill-gap analysis, recommendation

techniques, and continuous progress tracking, the system helps users understand where they currently stand, what they need to improve, and how they can progress toward their desired career role.
